As a member, you'll also get unlimited access to over 75,000 lessons in math, English, science, history, and more. Plus, get practice tests, quizzes, and personalized coaching to help you succeed. Adding polynomials is very easy! There are many ways to add polynomials that have been taught, but here's my favorite. I look at the problem and put a circle, square or triangle around the like ... (Yes, "5" is a polynomial, one term is allowed, and it can be just a constant!) These are not polynomials. $3xy^{-2}$ is not, because the exponent is "-2" (exponents can only be 0,1,2,...); $2/(x+2)$ is not, because dividing by a variable is not allowed $1/x$ is not either x is not, because the exponent is " $1/2$ " (see fractional exponents); But these are allowed: $x/2$ is allowed, because you can ...
