While leading companies have earned significant returns on IT investments in these areas, many have overlooked the benefits of advanced data management and analytics for environmental, health, safety and sustainability (EHSS) management. Data discovery tools, such as business intelligence (BI) tools, make it easy for analysts to explore the data and look for useful oddities or trends. But not all BI tools are sufficient for in-depth data analysis. BI tools might feature nifty charts and graphs help the masses understand what the data is saying.
