

Download Manual And Automated Testing

Automated testing allows you to execute repetitive task and regression test without the intervention of manual tester. Even though all processes are performed automatically, automation requires some manual effort to create initial testing scripts. Difference Between Manual Testing and Automation Testing Manual testing and automated testing cover two vast areas. Within each category, specific testing methods are available, such as black box testing, white box testing, integration testing, system testing, performance testing, and load testing. Manual testing and automated testing cover two vast areas. Within each category, specific testing methods are available, such as black box testing, white box testing, integration testing, system... The prior difference between manual testing and automated is that manual testing is carried out by human whereas automated testing is the testing performed by the software in an automated way. Automated testing provides high accuracy and reliability as compared to manual testing. Manual testing consumes more time with respect to automated testing.
