1. INTRODUCTION - OVERVIEW - Biology as a science deals with the origin, history, process, and physical characteristics, of plants and animals: it includes botany, and zoology. A study of biology includes the study of the chemical basis of living organisms, DNA. Other related sciences include microbiology and organic chemistry. Sexually reproducing organisms require an egg and a sperm to create new life. This is the story of the egg (or ovum), the female sex cell and one of the most crucial elements of biological diversity.
