

Download Openvms System Manager Manual

OpenVMS Management Station allows you to organize the systems you need to manage in ways that are meaningful to you and your environment, and allows you to manage user accounts on those systems. You can easily manage user accounts across multiple OpenVMS systems, depending on your needs.19.1.1

Understanding UETP. UETP is a software package designed to test whether the OpenVMS operating system is installed correctly. UETP puts the system through a series of tests that simulate a typical user environment by making demands on the system that are similar to demands that can occur in everyday use.Refer to the OpenVMS Guide to System Security. SET SECURITY Modifies the security profile of an object. Such a profile contains the following characteristics: An access control list (ACL). A protection code, which defines access to objects based on the categories of system, owner, group, and world. An owner.Chapter 1 Overview of This Manual; Chapter 2 Using OpenVMS System Management Utilities and Tools; Chapter 3 Installing, Upgrading, and Updating Software; Chapter 4 Starting Up and Shutting Down the System; Chapter 5 Customizing the Operating System; Chapter 6 Managing User Accounts; Chapter 7 Managing Peripheral Devices; Chapter 8 Managing Storage Media
