1. Introduction. Programmable logic controllers [PLC] are computer-based, solid-state, single processor devices that emulate the behavior of an electric ladder diagram capable of controlling many types of industrial equipment and entire automated systems .PLCs are usually a main part of automatic systems in industry .They are very efficient and reliable in applications involving sequential ...Setting The Standard in PLC Ladder Logic Training. Combine our ProSim-II programmable process simulations with a PLC Editor/Emulator which mimics Allen Bradley's (Rockwell) RSLogix and you have LogixPro; a complete stand-alone PLC training system without the expense of a PLC.
